

Rohde & Schwarz and essentry join forces

Rohde & Schwarz and essentry are pleased to announce their cooperation for a joint exhibition at the protekt convention in Leipzig on November 8-9, 2023. Both companies stand for uncompromising security that is "Made in Germany" and will be showcasing leading solutions for access management and physical access control in the critical infrastructure sectors at the protekt.

Rohde & Schwarz is known for its many years of expertise in producing body scanners for use in security-controlled areas. Their product is known world-wide due to its extensive use at airport security checkpoints. Similarly, essentry provides border-control-level access management with identity verification for companies belonging to critical infrastructure.

Combining the products from both German companies offers a solution for highly secure and innovative access management that follows a holistic security concept. Their joint appearance at the convention enables visitors to directly experience the combined access solution and provides insights into otherwise inaccessible security areas.

“Together with Rohde & Schwarz, we can demonstrate how physical security functions best within a comprehensive security concept. We’re excited to attend the convention and we look forward to future collaborations,” says essentry founder Dr. Dennis Lips.

“The joint solution with essentry should give companies ideas on how to implement the regulations regarding physical security set forth in the upcoming KRITIS-Umbrella Law,” explains Andreas Haegele, VP Microwave Imaging at Rohde & Schwarz. “And the aspect of having innovation that is made exclusively in Germany should not be underestimated in this regard.”
